1 [Architecture]

Based on requirements from customers we build a sales website. Sitemap is the architecture of the entire website including the flow of activity and the structure of the necessary pages. Web pages are stratified based on their functions. The main of website is Home page. From this point we can go any where of website.

Home: - **Display promotions and product descriptions.**

- **Redirects to other pages in the system.**

- **To introduce customers to the field in which the website operates.**

Table of functions of the product system
